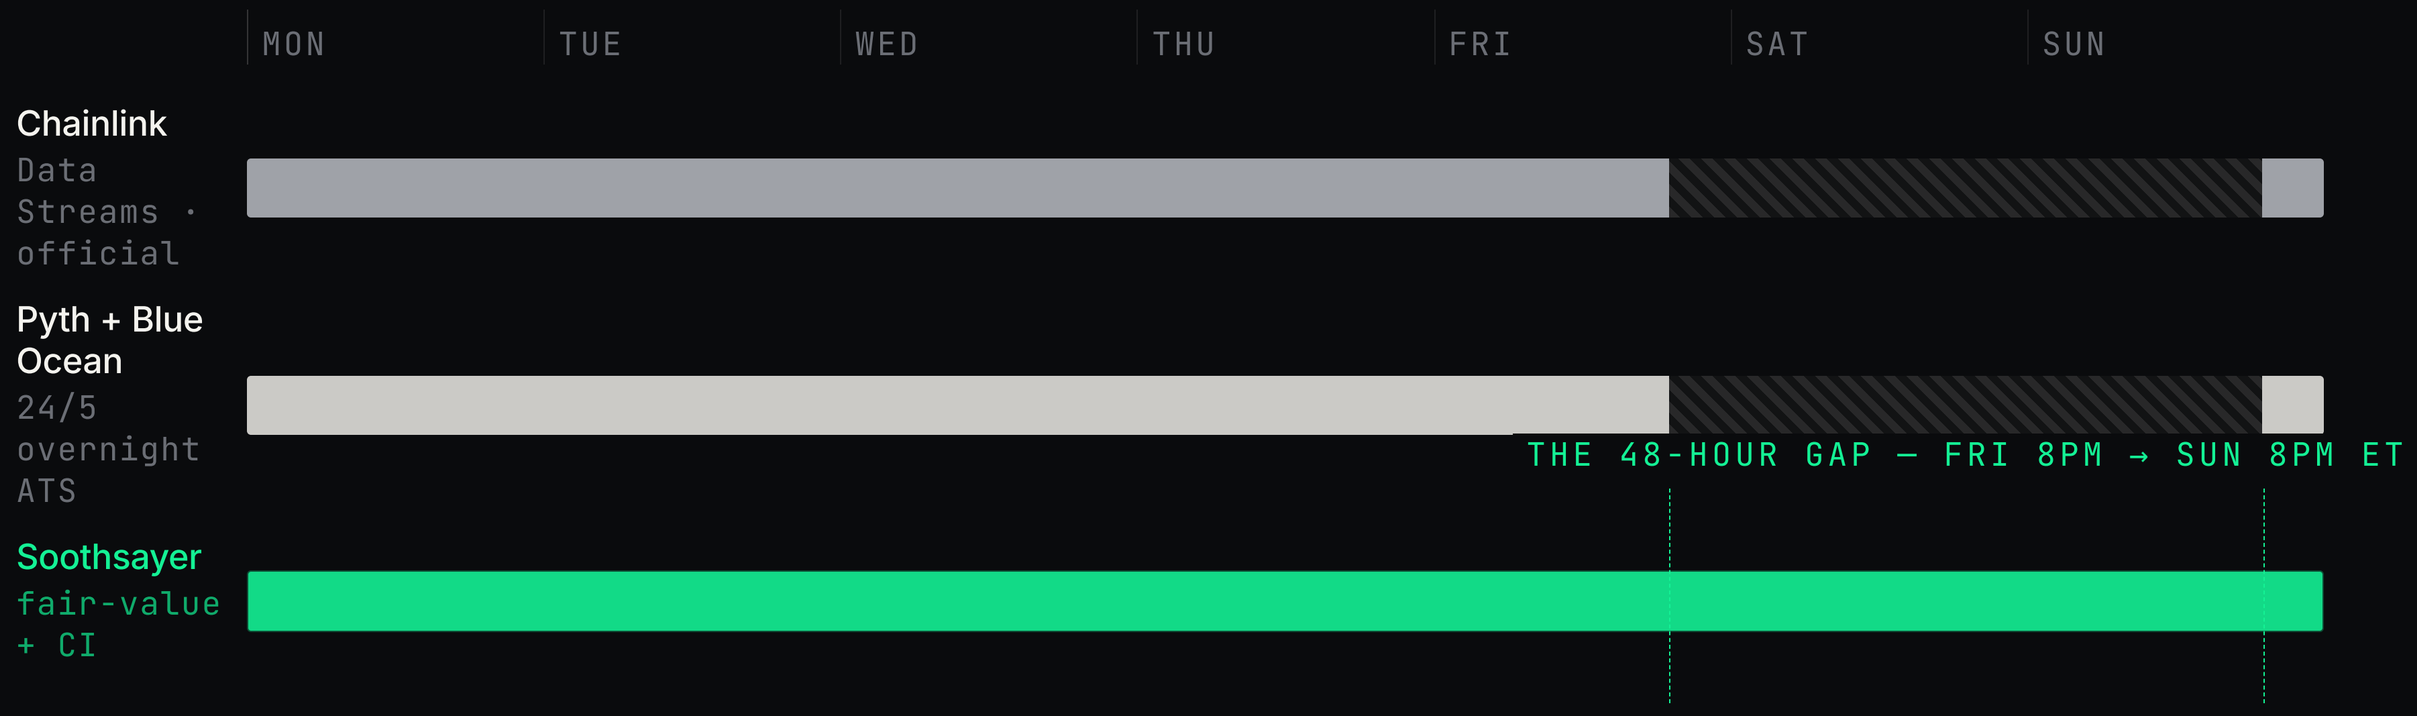
Soothsayer.

The oracle that **shows its math.**

Open-source fair value + confidence intervals for tokenized equities on Solana.

ADAM NOONAN — 2× EXITED FOUNDER

Every weekend, $3.5B of tokenized equities on Solana have no principled price.



— Chainlink schema v11 · marketStatus = 5 → stale hold

Why now.

$25B+

XSTOCKS CUMULATIVE VOLUME

95–99% of all tokenized-equity trading activity lives on Solana.

2×/mo

KAMINO XSTOCK SUPPLY

$25M supply, caps doubled across 6 tickers in March 2026.

$26.4B

TOKENIZED RWA ONCHAIN · +300%

RWA is the fastest-growing segment of onchain finance entering 2026.

INCUMBENT ADMISSION

"Without these capabilities, tokenized products are exposed to potential mispricings, unfair liquidations, regulatory gaps, and other critical risks."

CHAINLINK · V10/V11 LAUNCH BLOG · BLOG.CHAIN.LINK

Why this matters — the used-car-lot analogy.

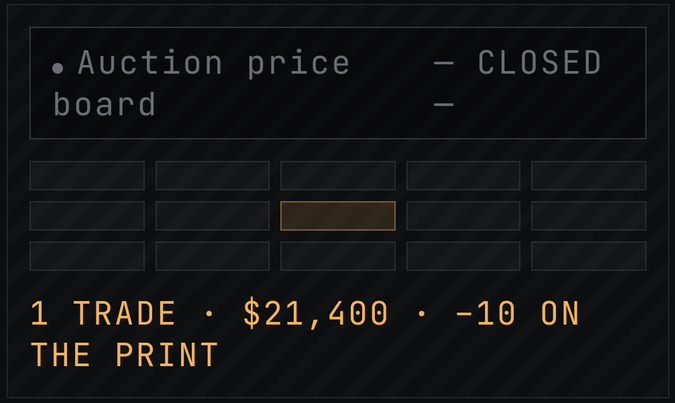
01 · Normal day

Big auction open.

Fair price = auction + small dealer markup. Market is deep, competitive, honest.

02 · Saturday, rainstorm

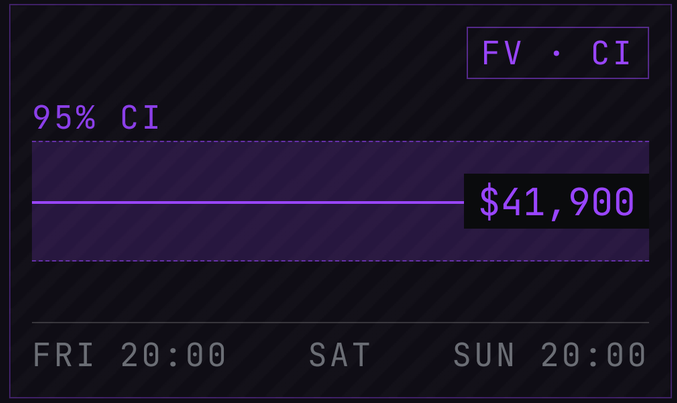
Auction closed.



One trade in an empty lot. Technically "the market price" — but it's not what the car is worth.

03 · Soothsayer reading

Fair value + honest uncertainty.



ES futures | Kraken perp | Crypto β | DEX ↓

Soothsayer publishes fair value + honest uncertainty. Protocols don't liquidate on a print from an empty lot.

Open market ≠ fair price when nobody's around. Soothsayer is the model that tells you which is which.

The coverage gap.

COMPETITIVE MATRIX

PROVIDER	WEEKEND COVERAGE	METHODOLOGY	CONFIDENCE INTERVAL	OPEN SOURCE
Chainlink Data Streams	– stale hold	Median, opaque	– none	– closed
Pyth + Blue Ocean	– overnight only	Weighted median	~ quote dispersion	~ partial
RedStone Live	~ 24/7 marketed	– undisclosed	– none	– closed
Soothsayer	✓ weekend + CI	✓ published math	✓ time-varying	✓ Apache / MIT

WINS 4 OF 4 AXES

Coverage is the race everyone's running. Methodology is the one nobody's entered.

A transparent, model-based fair-value feed for the hours the market is closed.

01

Free on-chain fair-value feed + confidence interval for tokenized equities on Solana.

A second opinion any protocol can read alongside their primary oracle — priced for the hours Chainlink tells them to pause.

02

x402-gated premium data for autonomous agents.

Higher-frequency snapshots, model decomposition, historical queries. Stablecoin micropayments per call — no KYC, no subscription.

03

Open-source math, grounded in published econometrics.

Madhavan–Sobczyk state-space · Hasbrouck VECM · HAR-RV · Yang–Zhang · Hawkes toxicity. Methodology as the trust primitive, not the black box.

Cong et al. (SSRN 5937314) · Hasbrouck, J. Finance 2003 · Boyarchenko et al. JFE 2023

What Soothsayer protects against.

FIVE SCENARIOS

01

Weekend flash crash

WITHOUT

Borrower liquidated on a thin-book print that reverts Monday. Position gone.

WITH

Hawkes toxicity gate flags reflexive flow. CI widens. Protocol pauses.

02

Adverse Monday gap

WITHOUT

Stale-hold says Friday close is fine. Monday opens −8%. Bad debt.

WITH

Live futures + Kraken perp funding update FV. Protocol tightens LTVs pre-emptively.

03

Manipulation / toxic flow

WITHOUT

Bad actor dumps into a thin book, triggers liquidation cascade.

WITH

Branching-ratio detects reflexivity. DEX down-weighted. CI reflects the risk.

04

Halts & corporate actions

WITHOUT

Token-2022 multiplier updates with lag. Liquidations fire in the inconsistency window.

WITH

Regime = Halt. CI widens to near-infinity. Consumers: do not act on this price.

05

Primary-oracle stale

WITHOUT

Primary has an incident. Protocol freezes (lost revenue) or trusts stale data (bad debt).

WITH

Soothsayer as independent secondary. Live cross-check plus a fallback number.

Every scenario: the protocol has to pick a number to act on. **Soothsayer is the principled, uncertainty-aware number.**

Wedge, TAM, outcome.

2026 → 2030

CURRENT WEDGE

$150–600k

ANNUAL · KAMINO ALONE

On $25M xStock supply today. Kamino's current liquidation-pause cost. Doubling month over month.

2030 OUTCOME

$150M–$1.5B

VALUATION RANGE

Comparable multiples: Pyth 20–40×, RedStone 15–55× on 2030 ARR.

L1 · TAM	Tokenized RWA, global	$9–16T
L2	Tokenized equity subset	$200B
L3	Solana share @ 50%	$100B
L4	Oracle revenue pool · Solana	$100–420M
L5 · SAM	Closed-market fair-value slice	$20–170M
L6 · ARR	Soothsayer 2030 @ 15–25% share	$3–42M

Business model.

REVENUE VECTORS · RANKED

01 · PRIMARY	Data licensing · B2B	Historical fair-value dataset + model decomposition sold to quant funds, market makers, and other oracle operators.	SHIP NOW
02 · SECONDARY	x402-gated premium API	Per-call USDC micropayments for higher frequency, model state, and pre-publication snapshots. Agent-native.	SHIP IN MVP
03 · TERTIARY	Consumer-protocol subscriptions	Per-read / per-subscription for lending and perp protocols — gated on the Kamino wedge closing first.	2027
04 · LONG TERM	Publisher DAO + token fee share	The Pyth playbook, once methodology has replicated across independent publishers. Not near-term.	2029+

OPERATING COST **$310–800 / mo** — the moat is methodology, not infra.

Risks and honest unknowns.

01 **H8 is not yet proven.** If Chainlink's stale hold is already tight enough versus Monday's open, our core anchor loses weight.

02 **Single-publisher credibility gap.** Pyth ships 100+ institutional publishers. We ship one model. Multi-publisher trust has to come through replication, not BD.

03 **RedStone is iterating on the same space.** $840M FDV, Securitize + BUIDL + ACRED, and Live 24/7 shipped March 2026. They could publish methodology first.

04 **Distribution is owned by Chainlink.** xStocks Alliance, Kamino, Ondo rollout. Our path is secondary observation, not primary replacement.

05 **CTA / UTP licensing is gray.** Futures-primary input stack sidesteps SIP by design; cash NBBO stays calibration-only. Still a surface worth naming.

06 **Kamino TVL is still small.** $25M xStock supply today. The growth story is unlocking capital efficiency, not capturing fees on existing flow.

The ask.

PHASE 0

1 week

Validation

H8 backtest on historical Kamino xStock tx data. Thesis stands or it doesn't — we find out before building.

PHASE 1

6 weeks

MVP

Free on-chain feed on devnet across 8 Kamino-onboarded xStocks. x402 premium endpoint prototype. Colosseum submission.

PHASE 2

2026 H2 → 2027

Production

Mainnet, first design-partner integrations (Kamino, Backed, Ondo), first B2B data-licensing contract, SDK for RWA issuers.

SPECIFIC ASKS

A Feedback on **positioning** — secondary risk oracle vs. open RWA primitive.

B Intros to **Kamino BD, Backed, Ondo**.

C Superteam-brokered **Solana RPC** for historical Kamino tx backfill.

MY EDGE

Rust + traditional quant time-series.

State-space models, cointegration, vol modelling — in the language Solana runs in.

The overlap of these three pillars is vanishingly small in the Colosseum submission pool.
