Five-line serving lookup

$$\hat{p}_t = p_t^{\text{Fri}} \cdot (1 + r_t^F)$$

$$q_{\text{eff}} = c(\tau) \cdot q_r(\tau) \quad c \in \{1.000, 1.000, 1.079, 1.003\}, \delta(\tau) \equiv 0$$

$$\text{half}_t = q_{\text{eff}} \cdot \hat{\sigma}_s(t) \cdot p_t^{\text{Fri}}$$

$$L_t = \hat{p}_t - \text{half}_t, \quad U_t = \hat{p}_t + \text{half}_t$$

Per-read receipt (P1: auditability) — 16 deployment scalars (12 q_r + 4 $c(\tau)$) + per-symbol $\hat{\sigma}_s(t)$

PricePoint{ symbol, as_of, $\tau_{\text{target}} = \tau$, $\tau_{\text{served}} = \tau$, $\delta(\tau) = 0$, $\hat{p}_t$, L_t , U_t , r , sharpness bps, diagnostics{ c , q_{eff} , q_r , $\hat{\sigma}_s$ } }
