

Simulation study — half-width and coverage at $\tau = 0.95$, 100 reps $\times$ 10 symbols per DGP

Avg. Half-width (bps)

Avg. Coverage

Box = per-(rep, symbol) cell distribution, N = 1,000 per row. M5 rows = unweighted Mondrian; LWC rows (bold) = deployed $\hat{\sigma}_s$ -standardised. Visual idiom: Romano et al. (2019), Fig. 4.
